

SureShade R8 Controller Reset

SureShade Generation 3 (Software Code Version R8) Shade Controller Current Position Reset Functionality

The current SureShade controller, as indicated by a software code of “R8” in the controller serial number has a reset functionality to enable a Service Technician to quickly reset the controller’s memory of its position. Below are instructions that will guide a technician through the steps in resetting the shade.

If the shade is **fully retracted**, follow these steps to reset the controller:

Step 1 – The picture shows the DIP switches 1 thru 8 are in the off position for normal operation. To tell the controller the shade is fully retracted, turn **switch #7** to an on position.

Step 2 – Press the **blue reset button** to communicate the reset of the retracted position.

Step 3 – Turn **switch #7** to the off position and resume operation.
